Sole Vibram Vertige+ PU attachments for semi-automatic crampons

Weight 2060g pair **\$489**

SUPERFEET, The Premium Insole

Superfeet's firm, contoured shape provides comfort that soft insoles cannot achieve.

Insoles are like mattresses. A good mattress is made of firm, supportive materials. A bad mattress is soft and unsupportive. Same thing with insoles. When you stand on a Superfeet Premium Insole, you can feel the firmly supportive shape and materials. It's not soft and mushy like other brands because although soft non-supportive insoles feel good when you first put them in your shoes, in the long run your foot problems don't disappear.

Support the Foot. Align the Body.

Wearing soft insoles is like running in the soft, dry sand at the beach. Initially it feels good, but you quickly grow tired, waste energy, and begin to feel the stress on your knees and back. Wearing Superfeet Premium insoles is like running on firmer, wet sand. It's still comfortable, but your feet feel more balanced and stable, and it's certainly more productive and enjoyable from a performance point of view.

Designed primarily for footwear with a removable insole, Superfeet **GREEN** provides maximum support and shock absorption. Ideal for medium to high arch shaped feet. Recommended footwear: Bushwalking Shoes & Boots, Ski Boots, Everyday Shoes

Combination Leather & Synthetic Boots

 <p>ASOLO POWERMATIC 400 ♀♂ Gore-Tex®</p> <p>The innovative Power Matic sole, with the revolutionary Micro Pulley lacing system and Wide Fit measure that guarantees maximum efficiency and comfort. Power Matic is your most secure support.</p> <p>Weight 1400g pair \$369</p>	 <p>ASOLO FLAME Gore-Tex® ♂</p> <p>A moderately aggressive, dual-density outsole with Aso-brake for maximum downhill grip and offers superior grip on uneven terrains. The lightweight EVA midsole and suede and Cordura uppers lighten the load, the Active Heel Support (AHS) element absorbs shocks and minimizes fatigue.</p> <p>Weight 1290g pair \$349</p>
 <p>ASOLO DISCOVERY</p> <p>For trekking and light hiking, the Energy line offers models that are known for their gritty look and their revolutionary Duo Asoflex sole.</p> <p>Weight 1100g pair \$239</p>	 <p>ASOLO Amazon ♀, Everhard ♂</p> <p>Lightweight hiking boot. Vario Asoflex last and Freeland anatomic foot bed for comfort and support, combined with a lightweight durable upper. Upper Suede mm 1,6-1,8 water-resistant + Nylon, Asoflex Last for support, and Anatomic Footbed for comfort, with a Asolo Matrix rubber sole for grip, Active Hell Support.</p> <p>Weight 1050g pair \$329</p>

CARE & MAINTENANCE

- Clean your boots after each use.
- Eyelets (both outside as well as inside) should be carefully cleaned and dried in order to minimize the build-up of rust on the hardware.
- If you have a boot with calfskin lining, wipe out inside with a damp cloth after each use.
- Treat the leather on both the outside and the inside of your boots with the right products.
- Allow boots to air-dry, not in the sun or near heat sources.
- Take it to a knowledgeable cobbler for repairs.

As there are many different boots available, there are almost as many different proofing and treatment products. Get the wrong product, and it may make your boot waterproof but ruin the breathability of the Gore-Tex®. Suede and synthetic materials have different requirements again.

Our knowledgeable staff will be happy to recommend the correct product for you and your favourite walking boots!

BOOT FITTING: THE ART!

When trying on boots, make sure to bring the socks you would normally wear and any orthotics or custom footbeds you use. Boots and shoes are handmade by skilled cobblers, using mostly natural materials. Therefore you can experience minor variations in dimension or upper from pair to pair in a given size. What you are looking for is the size that holds your toes ever so slightly away from the front of the boot while the lacing system is snug across the top of your arch. To check the length, you should be able to slip one finger behind your heel when you are standing up with the boot unlaced and your toes touching the front. The fit across the top of your arch is the single most important factor. If the lacing system here doesn't hold your foot in place, the boot will not be stable on your foot while you walk. If the boot is too short, your toes will get crushed walking downhill. Too long, and your heel will slide up and down and give you blisters. Be patient and make sure you've got the right size and fit.
